

MTM-1

SB112C (x 2)

Music Demo System

# The Ultimate Modular Music Demo System

## The Clear Voice™ MTM-1 & Two SB112C

The Clear Voice™ MTM-1 two-way planar magnetic speaker represents a technological breakthrough that delivers the stellar sonic qualities of planar technology in an ultra compact form. While the box is small, the sound is not! The planar transducers generate a huge sound delivered with expressive details and powerful clarity. This combination of compact size and exceptional musical fidelity makes the MTM-1 an excellent choice for a wide range of installed or portable applications.

**Modular Magic!** The MTM-1's performance is expanded when matched with the companion SB-112C or SB-212C cardioid bass speakers. Combining the MTM-1 and SB components together creates a performance package suitable for a wide range of musical styles and genre by creating an equalized frequency response from 60 Hz to 19 KHz.

Installed in custom stackable road cases the MTM-1 and SB112C make the perfect modular demo system for showcasing the power and articulation of this unmatched technology. Powered by PowerSoft K3 and M50Q amplifiers and controlled by a Yamaha MGP12X mixer and Ashly Protea DSP, the MTM-1 & SB112C music demo is configured to be used in any environment and in any scenario. Live music, vocals, instrumentals, or recorded tracks, audio has never been reproduced with the precision and detail that is achieved with the MTM-1 and SB112C demo system.

### Features:

- Huge Sound - Planer Technology
- Powerful Clarity in a Small Footprint
- Exceptional Musical Fidelity Output
- Equalized Frequency Response from 60 Hz to 19 KHz

### Ideal Applications:

- Portable Applications
- Live Music, Vocals, Instrumentals, or Recorded Tracks
